

Aryan Singh

(778) 251-2074 | aryan.singh.lamba@gmail.com

EDUCATION

University of British Columbia

BSc. Cognitive Systems (Computational Intelligence and Design)

Vancouver, BC

Sept. 2024 – Present

EXPERIENCE

Medivizor

Remote

ML Engineer Intern

Jun. 2024 - Apr. 2025

- Trained GPT-4o for patient-friendly medical research summarization using curated article-summary pairs aligned to Medivizor guidelines
- Designed and ran a head-to-head evaluation on real research papers; measured Cosine Similarity, BLEU/ROUGE, BERTScore, METEOR, and Flesch-Kincaid readability
- Built data pipeline, compared model outputs to expert summaries and source papers, and visualized results

Digital Sarthi Software Solutions

Surrey, BC

Software Developer Intern

Sept. 2022 – Sept. 2024

- Built an event booking system using React, Redux, and Stripe
- Developed 14 REST APIs for small-business automation using SQL, Strapi, Koa, and Google Cloud, utilized by 5 businesses
- Implemented an automatic deployment pipeline through IONOS and Cloudflare
- Deployed and managed GCP cloud functions

PROJECTS

EvenSteven — Live rehearsal mix analysis

<https://github.com/extreme-coder/evensteven>

- Built an open-source Electron desktop app that analyzes rehearsal recordings for setlist loudness consistency, vocal masking risk, and section-level mix balance
- Developed a modular C++ audio pipeline for preprocessing, segmentation, and loudness analysis, with MATLAB scripts for visualization and reproducible reporting

Etyma — Real-time etymology visualizer for English text

<https://github.com/extreme-coder/etyma>

- Created a minimalist tool that colors each word in a text snippet by language of origin (Latin, French, Greek, etc.), with hover details, a dynamic legend, and a distribution chart
- Built a responsive UI that makes linguistic patterns instantly scannable for learners and writers

Windsim — Wind turbine siting & energy output simulator

<https://github.com/extreme-coder/windsim>

- Built a GIS application that predicts turbine energy output at any location using wind data/turbine power curves
- Modeled wake losses to forecast energy output; used simulated annealing to find optimal turbine sites
- Validated accuracy against 10 real wind farms (average prediction error 1.265%); added interactive visualizations (per-turbine/monthly output, homes powered) to drive siting decisions
- Won honorable mention in 2023 Greater Vancouver Regional Science Fair

SKILLS

Languages & Data: Python, C++, JavaScript/TypeScript, SQL, NumPy/SciPy, MATLAB

Back-End: Node.js, Django, REST APIs, Koa, Supabase

Front-End: React (Hooks), Redux, Electron, HTML, CSS

Cloud & Tools: AWS, Google Cloud, Git/GitHub, Stripe, Cloudflare

AWARDS

UBC CIC Hackathon — 1st Place

2025

NASA Space Apps Challenge — 1st Place (Local)

2024

Greater Vancouver Regional Science Fair — Honorable Mention

2023

Google Code Jam — Qualifier

2022

AMC — Honor Roll

2019
